Applied Biosystems 7300 Real-Time PCR System
A Real Affordable Approach to Real-Time PCR

• Four-color detection provides the flexibility to perform a variety of applications, including gene expression analysis, pathogen quantitation, SNP genotyping, and plus/minus assays that utilize internal positive controls

• Powerful, versatile software includes plate set-up wizards that guide you through experimental set-up; advanced data-viewing capabilities and automated analysis tools make data processing simple and straightforward

• Precision optics and a charge-coupled-device (CCD) camera, combined with a sophisticated multicomponenting algorithm, provide highly accurate, reproducible, and reliable results

• Latest generation, Peltier-based, thermal cycling system accommodates both standard 96-well plates and 0.2 mL tubes

• Small instrument footprint permits easy placement in any laboratory, even those with limited space

Introduction
The Applied Biosystems 7300 Real-Time PCR System is an integrated platform for the detection and quantification of nucleic acid sequences. Real-time PCR combines thermal cycling, fluorescence detection, and application-specific software to measure the cycle-by-cycle accumulation of PCR products in a single-tube, homogeneous reaction. Quantitative results are available immediately upon completion of PCR, with no need to run gels, purify PCR products, or perform any post-PCR manipulations. Real-time PCR runs are completed in under two hours, using 96-well plates and tubes (individual or 8-strip), with a supported volume range of 25 – 100 µL. Compared with manual PCR quantitation techniques such as Northern blotting or RNase protection assays, real-time PCR offers enormous time-savings, greater sensitivity, superior precision, and a larger dynamic range. This high-quality platform from the leader in real-time PCR systems provides data you can trust at a price you can afford.

Real-Time PCR Applications
The 7300 system supports many real-time quantitative PCR applications including gene expression analysis using relative quantitation (RQ) assays, and pathogen quantitation using standard curves. In addition, the system allows for qualitative, post-PCR detection of nucleic acids for allelic discrimination (SNP genotyping) assays and plus/minus assays that use internal positive controls.

Sequence Detection Software
Instrument software for the Applied Biosystems 7300 Real-Time PCR System runs on the Windows XP® operating system and provides instrument control, data collection, and data analysis. Powerful and user-friendly, sequence detection software includes the following features:

• Plate set-up wizards for easy experimental design, even with complex multicolor assays

• Real-time monitoring of amplification growth curves enables you to view run progress

• Auto-baseline and auto-threshold for simplified data analysis

www.appliedbiosystems.com
• Absolute quantitation of nucleic acid targets with the ability to simultaneously analyze multiple standard curves on a single plate

• Optional relative quantitation (RQ) study software with powerful data-viewing capabilities allowing the simultaneous analysis of up to ten 96-well plates containing gene expression data

• Automated SNP genotype calling capability with intuitive graphical output and quality-value assignment

• Simple dissociation curve data collection and viewing

• Tool tips for easy identification of sample wells when viewing amplification curves or SNP genotyping plots

• Lamp-life monitoring and instrument diagnostics provide confidence in your instrument’s performance

Fluorescence Detection
All sample wells in the 7300 system are illuminated with a tungsten-halogen lamp. Fluorescence emission is detected through four filters on to a CCD camera. The emission filters are optimized for use with FAM™/SYBR® Green I, VIC®/JOE™, TAMRA™, and ROX™ fluorescent dyes.

Computer Specifications
Applied Biosystems supplies a Dell™ Business Line computer (notebook or tower) for use with the 7300 system. For the latest computer specifications, please visit the Applied Biosystems Web site at www.appliedbiosystems.com

Installation Specifications
Using the TaqMan® RNase P Instrument Verification Plate, the 7300 system can distinguish between samples containing 5,000 and 10,000 template copies with a confidence level of 99.7%.
Demonstrated Performance

The 7300 system has been demonstrated to achieve the following performance targets:

- 9 logs of linear dynamic range
- Detection of 10 starting copies of a DNA template in a 50 µL reaction for a single reporter TaqMan® assay with a confidence level of 99.7%

Reagents and Disposables

A complete line of reagents including TaqMan® Universal PCR Master Mixes and SYBR® Green I Master Mixes, and disposables including tubes and 96-well plates, are available for use with the 7300 system.

TaqMan® Assays-on-Demand™ and TaqMan® Assays-by-Design™ Products

Applied Biosystems provides preformulated, ready-to-use, quality-tested, 5’ nuclease TaqMan® probe-based assays for use with the 7300 system (see table below).

Service and Warranty

Purchase of the instrument includes a one-year limited warranty on parts and labor, plus an installation package that includes set-up and calibration of the instrument from our highly trained Service Support team.

Support

Applied Biosystems technical specialists and scientists provide worldwide applications support and service.

iScience. To better understand the complex interaction of biological systems, life scientists are developing revolutionary approaches to discovery that unite technology, informatics, and traditional laboratory research. In partnership with our customers, Applied Biosystems provides the innovative products, services, and knowledge resources that make this new, Integrated Science possible.

Worldwide Sales Offices
Applied Biosystems vast distribution and service network, composed of highly trained support and applications personnel, reaches 150 countries on six continents. For international office locations, please call the division headquarters or refer to our Web site at www.appliedbiosystems.com

Applera is committed to providing the world's leading technology and information for life scientists. Applera Corporation consists of the Applied Biosystems and Celera Genomics businesses.
